HEALTHCARE VS. FINANCE "THROWDOWN"  
2019

Vendor:

Website Link:

API Description:

IdentityX is a mobile biometric authentication platform that allows customers to add device binding, face, voice, fingerprint, palm, PIN, native authentication capabilities, and GPS authentication methods into a new or existing mobile application. Customers use the IdentityX capabilities on their mobile device to securely authenticate a wide range of activities, such as authorizing online banking transactions, logging into a computer system, and authorizing access to medical records.

The IdentityX platform consists of an IdentityX server component, responsible for the secure storage and matching of user and device information, a database schema, and client components which offer biometric capture, quality assessment, and liveness detection capabilities on the device. In a typical scenario, users could be invited to enroll by simply downloading the app, logging in using existing credentials, and then self-registering their biometrics

Important Information:

For the Connectathon event, we are providing participants with a mobile app which is setup to use a sandbox demonstration environment. The app provides the ability to register and authenticate using biometrics such as Face, Finger, Palm and Voice. Daon will be on-site during the event to answer any questions and assist as necessary.

For any questions or to request a demonstration before the event, feel free to contact Jason Beloncik from Daon directly:

Jason Beloncik | Pre-Sales Engineer
